### GENERAL INSTALLATION AND OPERATION INSTRUCTIONS

- 1 Install the contact griller in the most convenient location for ease of cleaning, maintenance and general operation. If the unit is to be positioned in close proximity to a wall, partitions, kitchen furniture, decorative finishes, etc. it is recommended that they be made of a non-combustible material. If not, they shall be clad with a suitable non-combustible heat insulating material, and the closest attention be paid to fire prevention regulations.
- 2. The appliance is equipped with a signal lamp to indicate when the heating elements are energized.
- 3 Buttering both sides of the sandwich will prevent the sandwich from sticking as well as giving a golden brown finish to the end product.
- 4. With use, plates of the toaster become "naturally" conditioned to create a non-stick surface. Use of tinfoil or other coverings will not only impede the conditioning process, but may also affect performance.
- When the sandwich press is not in use, turn the temperature control to the lowest temperature and ensure that the lid is kept open.

#### PERIODIC DOWN FORCE ADJUSTMENT:

The down force tension of the toaster handle may require adjustment after an extended period of use. This will become noticeable when the handle and top plate start to slip down and not hold position.

This is easily adjusted, using a 5mm Allen key.

- 1. First loosen the rear spring cover by removing the M5 screw at the rear.
- 2. Remove the stainless steel cover to expose the brass tension block.
- 3. The tension block is fastened to the bottom casting with two 5mm Allen screws. By tightening these screws lightly the friction force on the toaster handle is increased.
- 4. The increased tension force will enable the handle and top plate to hold position again.
- 5. Once adjusted satisfactorily, the spring cover can be replaced.
